

Customized Special Parts Providers

compiled by Fastener World

In recent years, the demand for customization has gradually increased. Products that customers ask for are no longer standard ones, but special parts meeting different strict standards can be used in different areas and adjusted whenever they are needed. Nowadays, customization has become an inevitable trend in the market. Customization needs not only professional manufacturing technique but the close cooperation and communication between customers and companies. Hence, both sides are essential to creating perfect customized parts.

With the impact of the global market, standard parts with lower prices and lower entry barriers are not as important in today's market anymore. Only when the industry has its own uniqueness, experience, R&D and marketing strategy can it find its own blue ocean.

This time, we invited several domestic and foreign enterprises in the special parts field to share with our readers their strategies and experience and how they are able to be the leaders in such a competitive fastener market.

Screwtech Industry Co., Ltd. Has The Total Solution to Create Various High Value Added Special Parts

by Michelle Hsieh, Fastener World
